==== EU Funds 3.2

BeG Results Achieved

- The **IT Strategy** of BeG is developed for **the period 2011 – 2015**. A **Road Map** for the IT Strategy is created.
- The **legal base** and **procedures** for **certification** of **Administrative Information Systems** (AIS) of Bulgarian Government (BG) are created. The process of Certification of BG AISs is in progress.
- The **legal base** and **procedures** for registration of **Electronic Administrative Services** (EAS) of AIS are created. The process of registration of EAS is in progress.
- The **legal base** and **procedures** for registration of **Information Data Objects** (IDO) of AIS are created. The process of registration of IDO is in progress.
- The **legal base** and **procedures** for realisation of **Single Environment for Electronic Documents Exchange** (SEEDE) are created. The SEEDE establishment is in progress.
- The **BeG Portal** version 1 is **created**. A version 2 of this portal is under construction.

Part 2

Bulgarian eGovernment Administrative Services

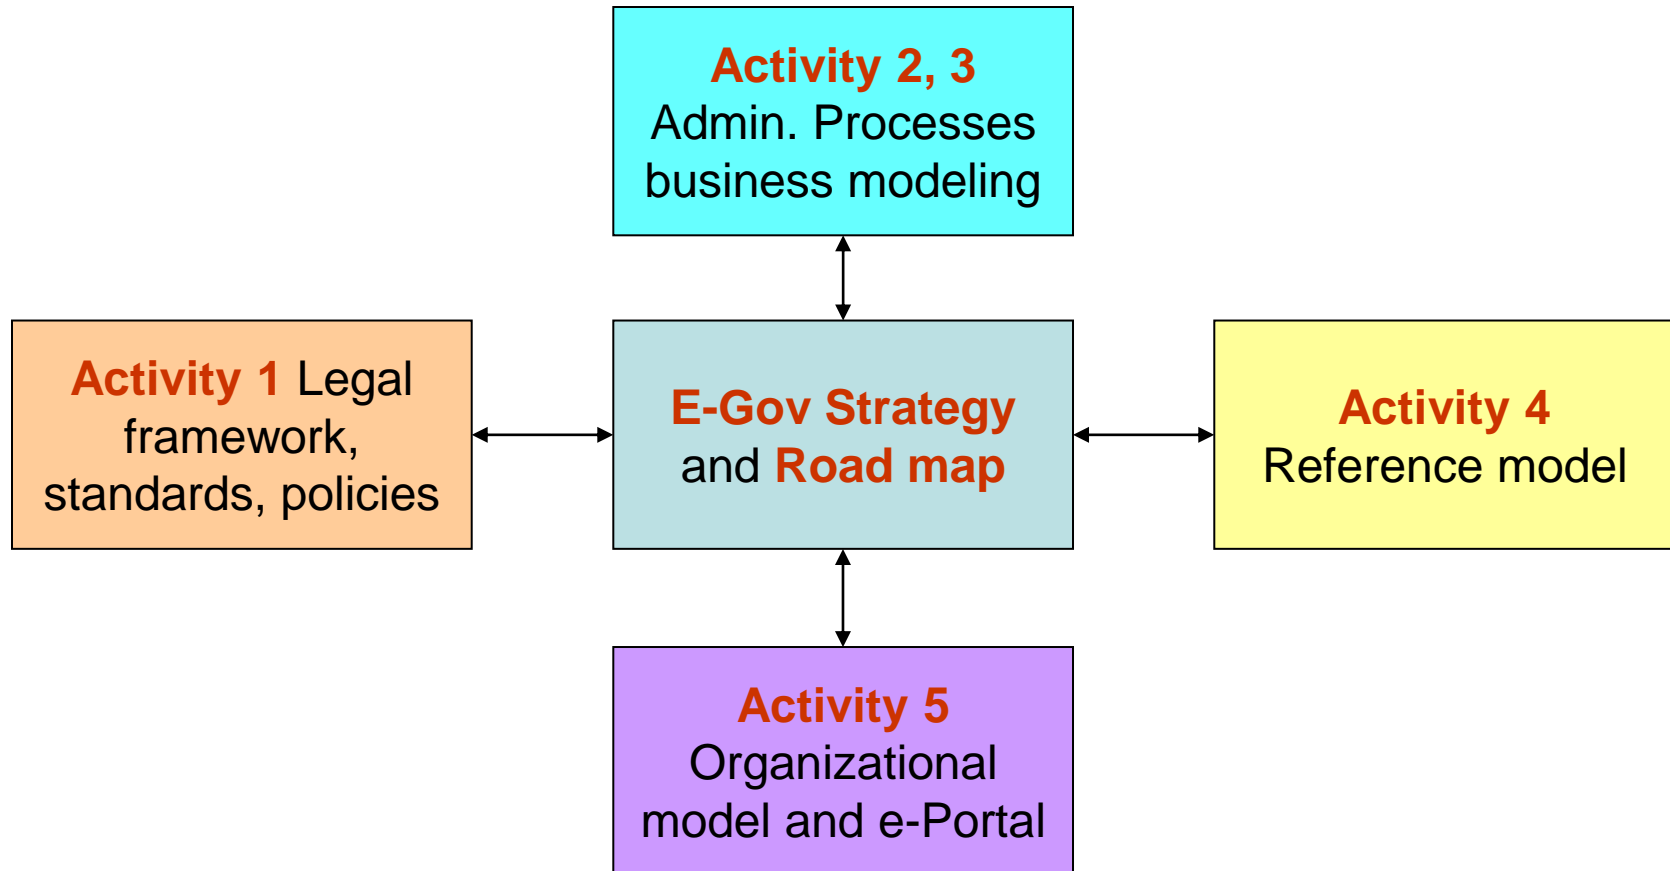

Scope of the Project

- Project name: **Development of administrative services as e-services**
- Project No **K10-31-1/07.09.2010**
- Project duration:
 - start: **7 Sep 2010**
 - end: **7 Mar 2012**
- Budget: **18M BGN.**
- Target groups: **Central and local government, citizens and business organizations**

Project Goals

- Common goal: **Better administrative services for citizens** and the business and users satisfaction increase using e-Government
- Specific goals
 - **Improved legal framework** focused on administrative e-services.
 - Realization of **G2G Administrative Services**.
 - Improved processes for e-services delivery.
 - Realization of **Single Window Concept**.
 - **Capacity building** for realization of eG politics.

The Project Actions

Analyzed Administrative Services

- Summarized information for **2143 services**:
 - **1946** for **Central/Special admin** and regional administration
 - **197** for **local administration**
- Detailed information for **685** priority services according to decision of CoM 619 for Central/Special admin
- Summarized results for priority 685 services in 2009:
 - **162 AdmS** are used **0** to **99** times;
 - **83 AdmS** are used **100** to **499** times;
 - **94 AdmS** are used **500** to **4 999** times;
 - **67 AdmS** are used **5 000** to **49 999** times;
 - **38 AdmS** are used **50 000** to **499 999** times;
 - **9 AdmS** are used more than **500 000** times.
- The result is a list containing **415 administrative services, candidates for realization**:
 - **218** for **central and regional administration**
 - **197** for **local administration**

Analyzed Administrative Registers

- Summarized results for the expected usage of the **identified registers and internal e-services**:
- Expected **register usage** in number of admin services:
 - **49** are used in more than **5 admin services**;
 - **42** are used in more than **10 admin services**;
 - **29** are used in more than **20 admin services**;
 - **16** are used in more than **30 admin services**.
- Expected **annual transactions per register**
 - **68** are used in more than **1 000 times**;
 - **60** are used in more than **10 000 times**;
 - **49** are used in more than **100 000 times**;
 - **28** are used in more than **1 000 000 times**.

Analyzed IT Infrastructures in the State Administration

- The data are collected during internal MTITC investigation which took place in 2010. The results **do not reflect the precise picture in IT sector**, but illustrates the **sector tendencies**. Data is as precise as they are provided by the respective organization participated in the investigation.
- Analyzed structures – **48**, including **Central administrations - 11**, **Agencies – 36**, **8** of which have less than **50** employees, **16** – up to **300** employees, **8** – up to **600** employees, **4** – up to **1000** employees and **2** with more than **1000** employees.
 - **7** organisations are **without IT employes**
 - **17** organisations are **without IT department**
 - **27** organisations **haven't data reservation**
 - **17** organisations **don't use DBs**
 - **20** organisations **are not included in the National State Administration Network**
 - **8** organisations **haven't any internal connections**
 - **7** organisations **haven't any protection from hackers attacks**

Identified Problems for Realisation of EAS

- P1 **Contradictory legal base** in e-Gov area.
- P2 **Poorly standardized information model** of State administration
- P3 Not effective and **poorly standardized technological framework** for AIS integration
- P4 **Poorly standardized communication** among the different IT component in State administration
- P5 **Poorly standardized e-service nomenclatures**, used in State administration.
- P6 **Lack of common methodology** for business processes description and realization

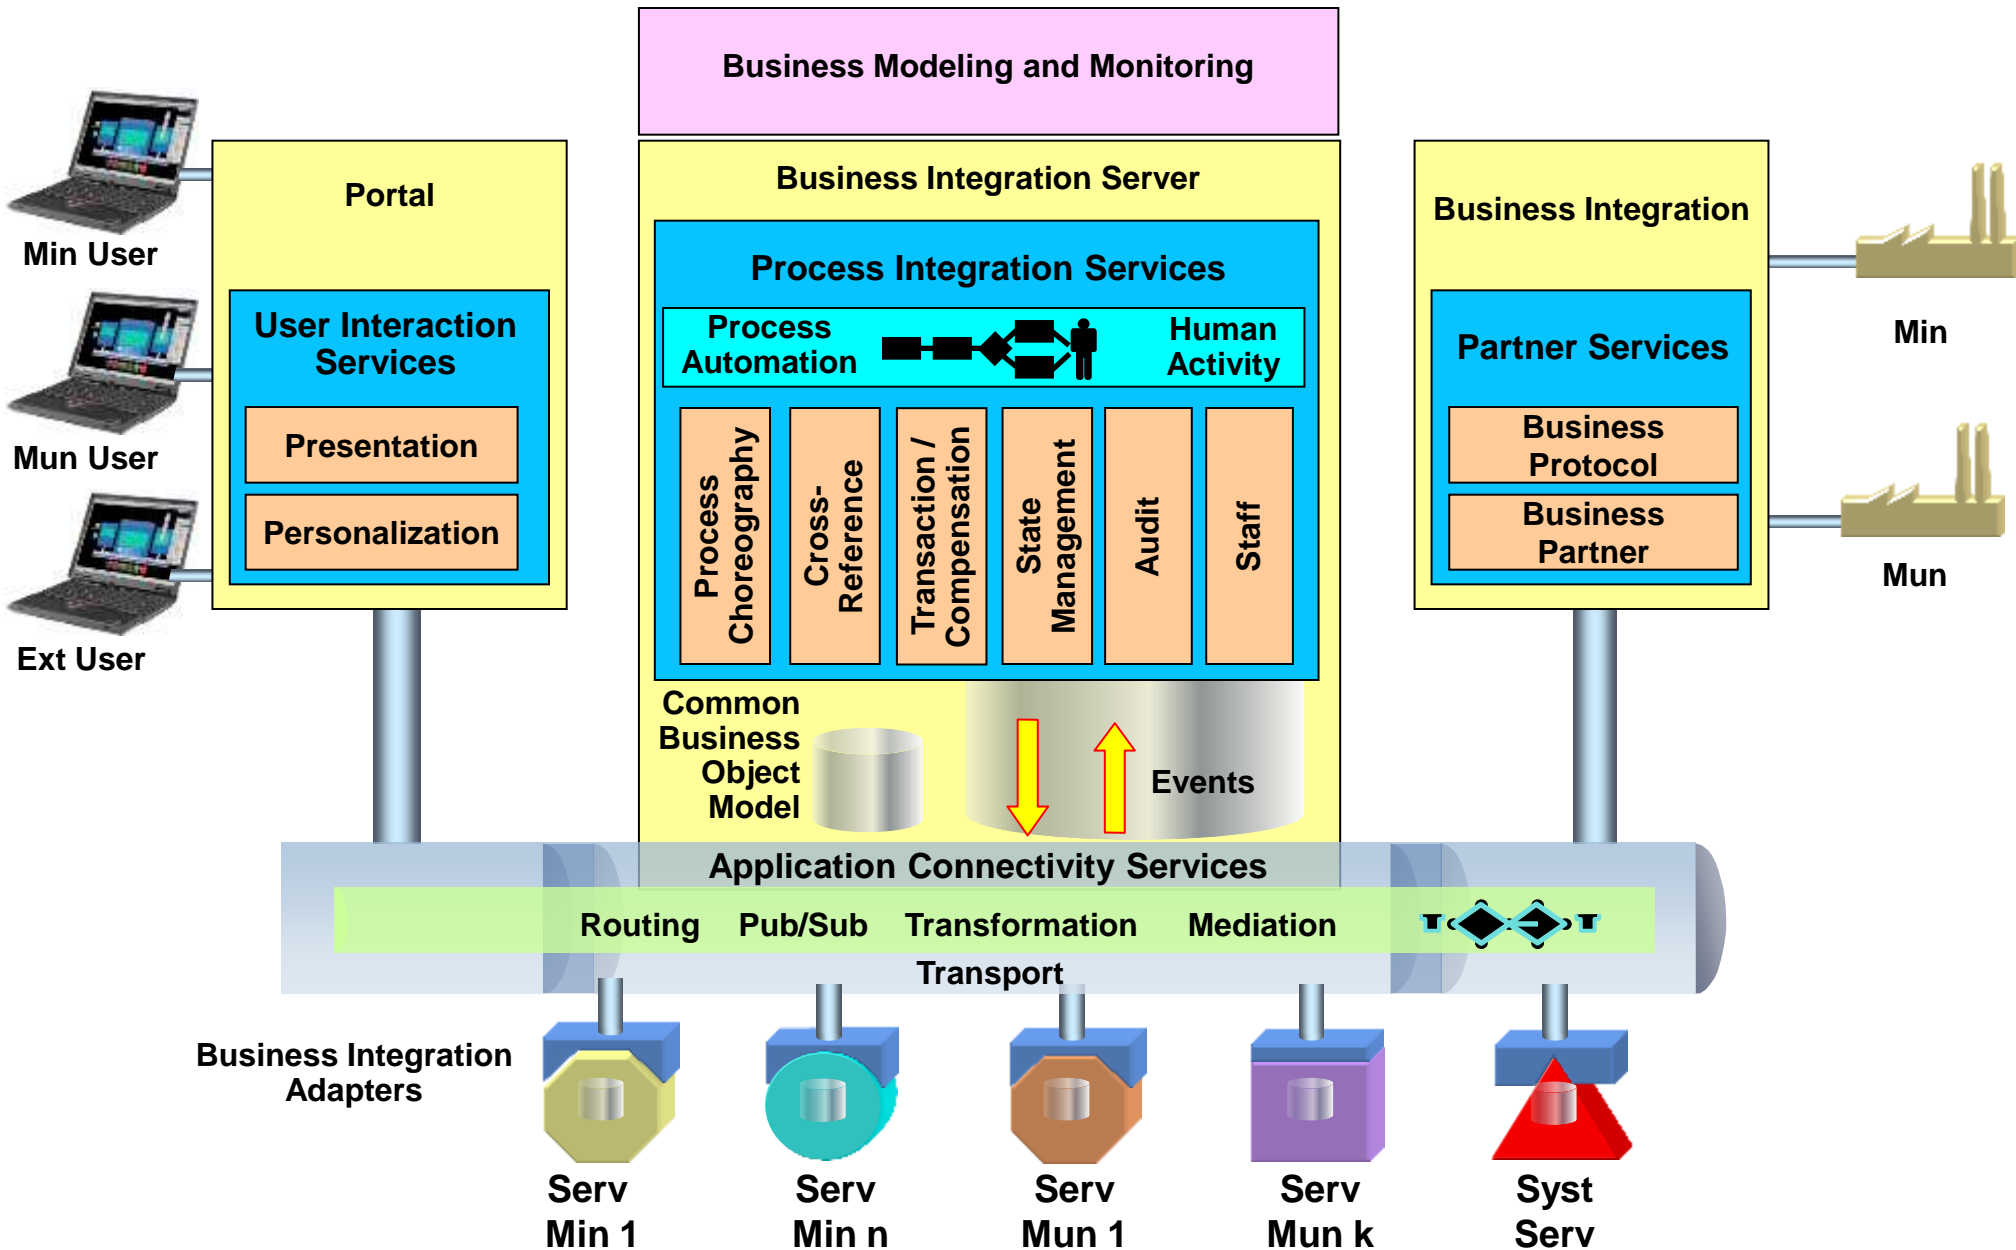

Identified Problems for Realisation of BeG TFr

- P1 **Lack** of **Single Methodological Base** for development and support of AIS in State Administration.
- P2 **Not Effective** and **not Synchronized planning** of sectoral AIS development.
- P3 **Big Contrast** in the **realised AISs** concerning **TFrs**, used **tools** and **instruments**.
- P4 **Bad technological discipline** of the **AISs support teams**.
- P5 **Lack** of **standartisation in communication** area of AISs.

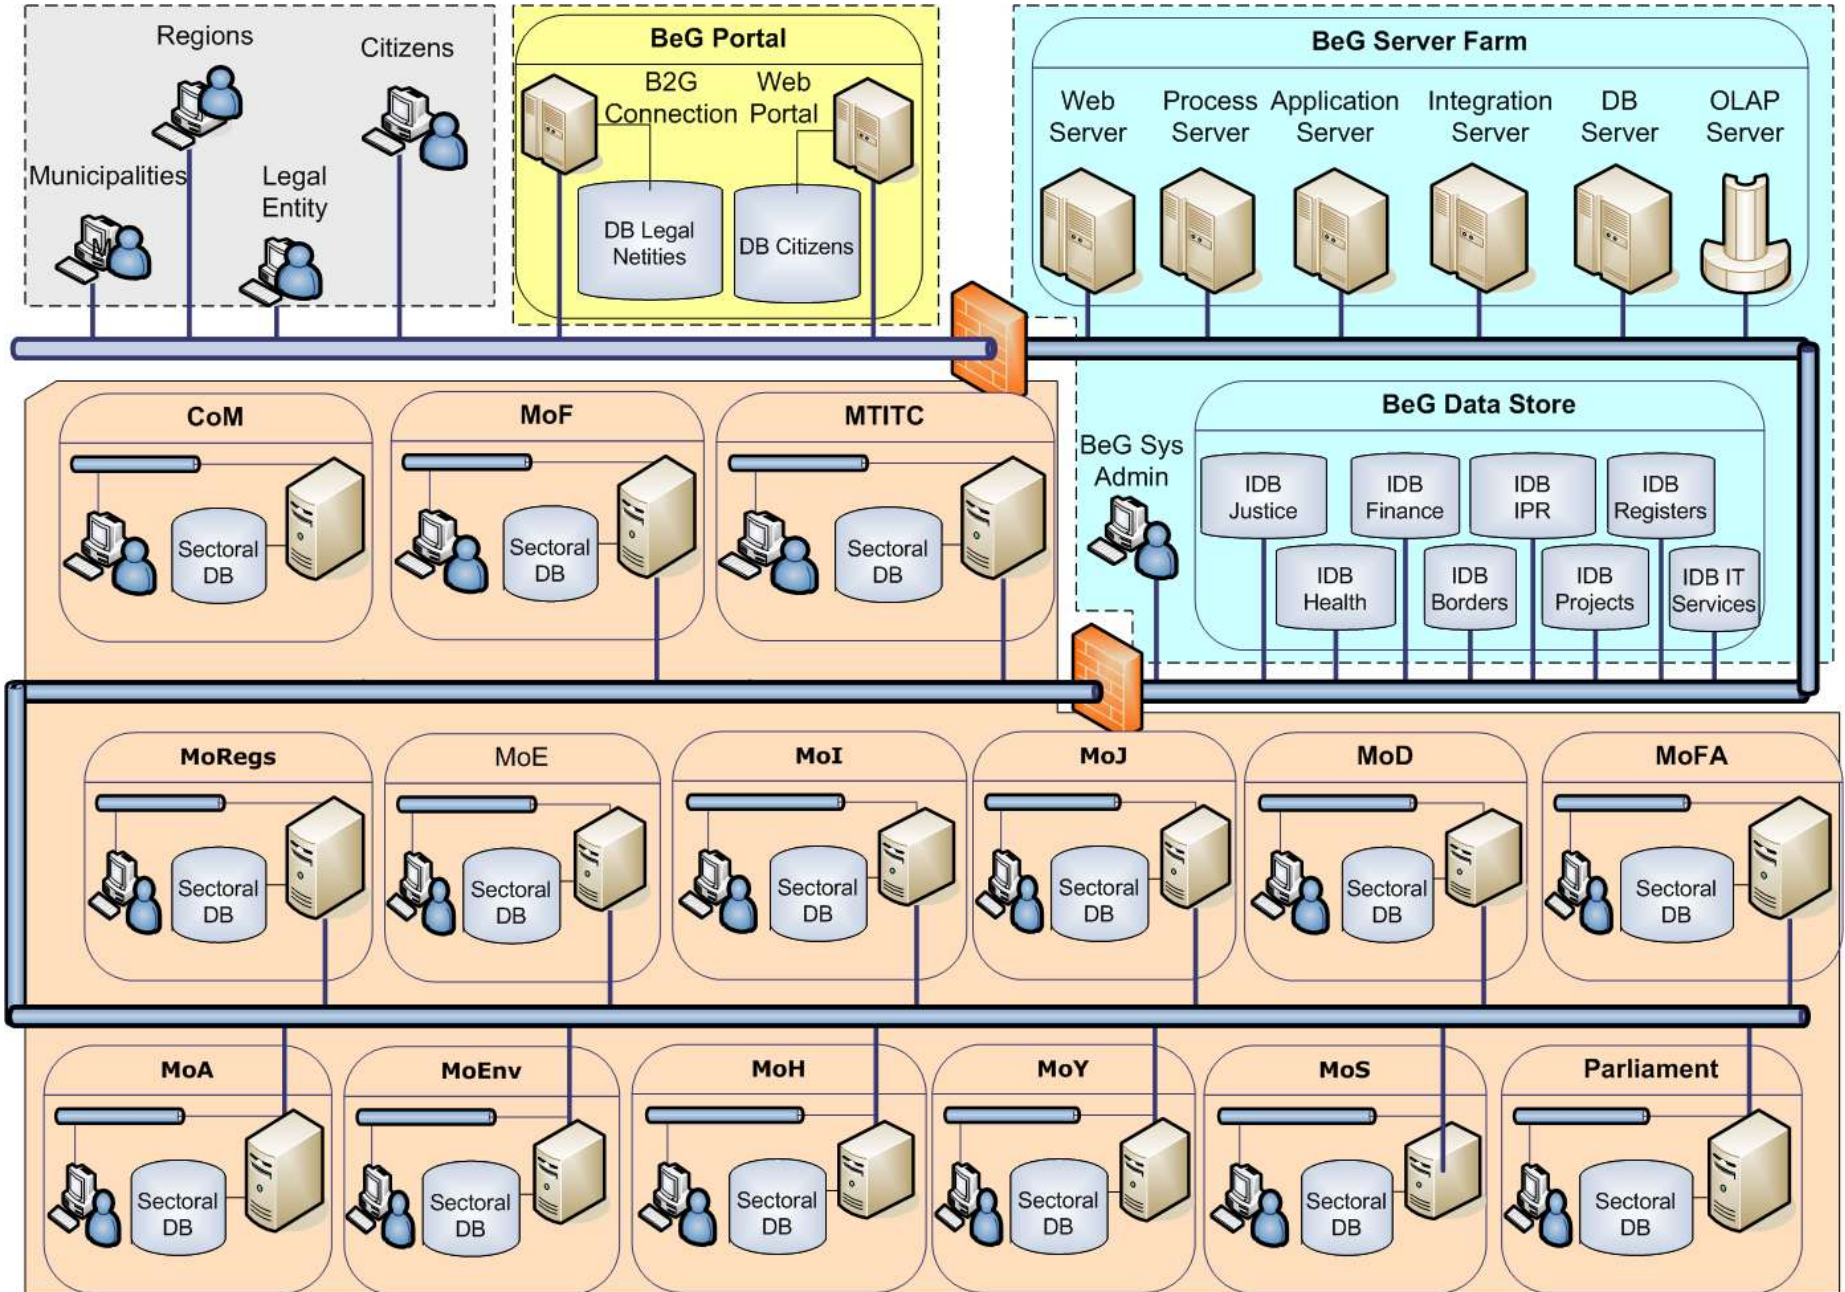

Part 3

eGovernment Technological Framework

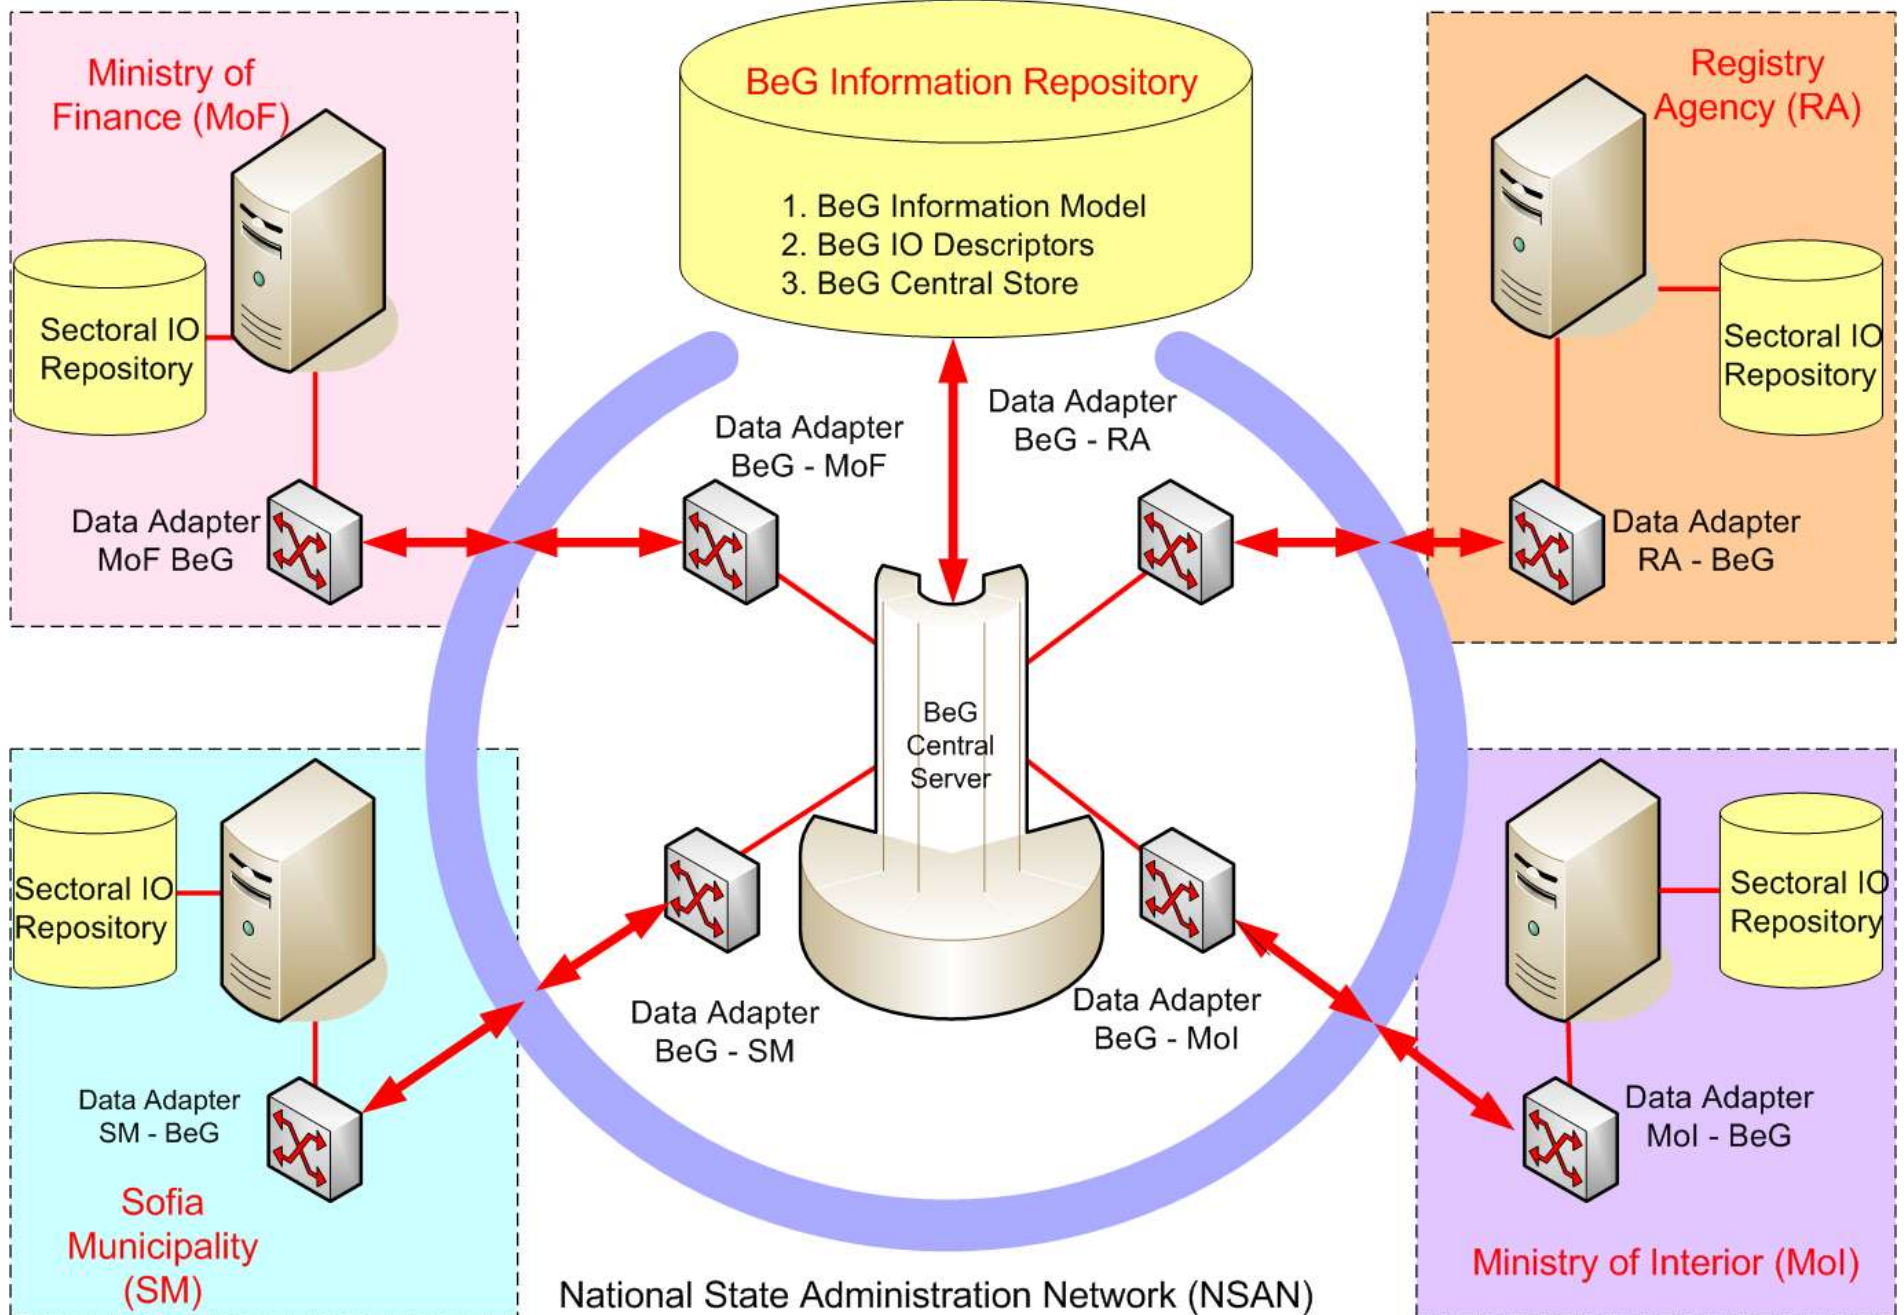

BeG Technological Framework

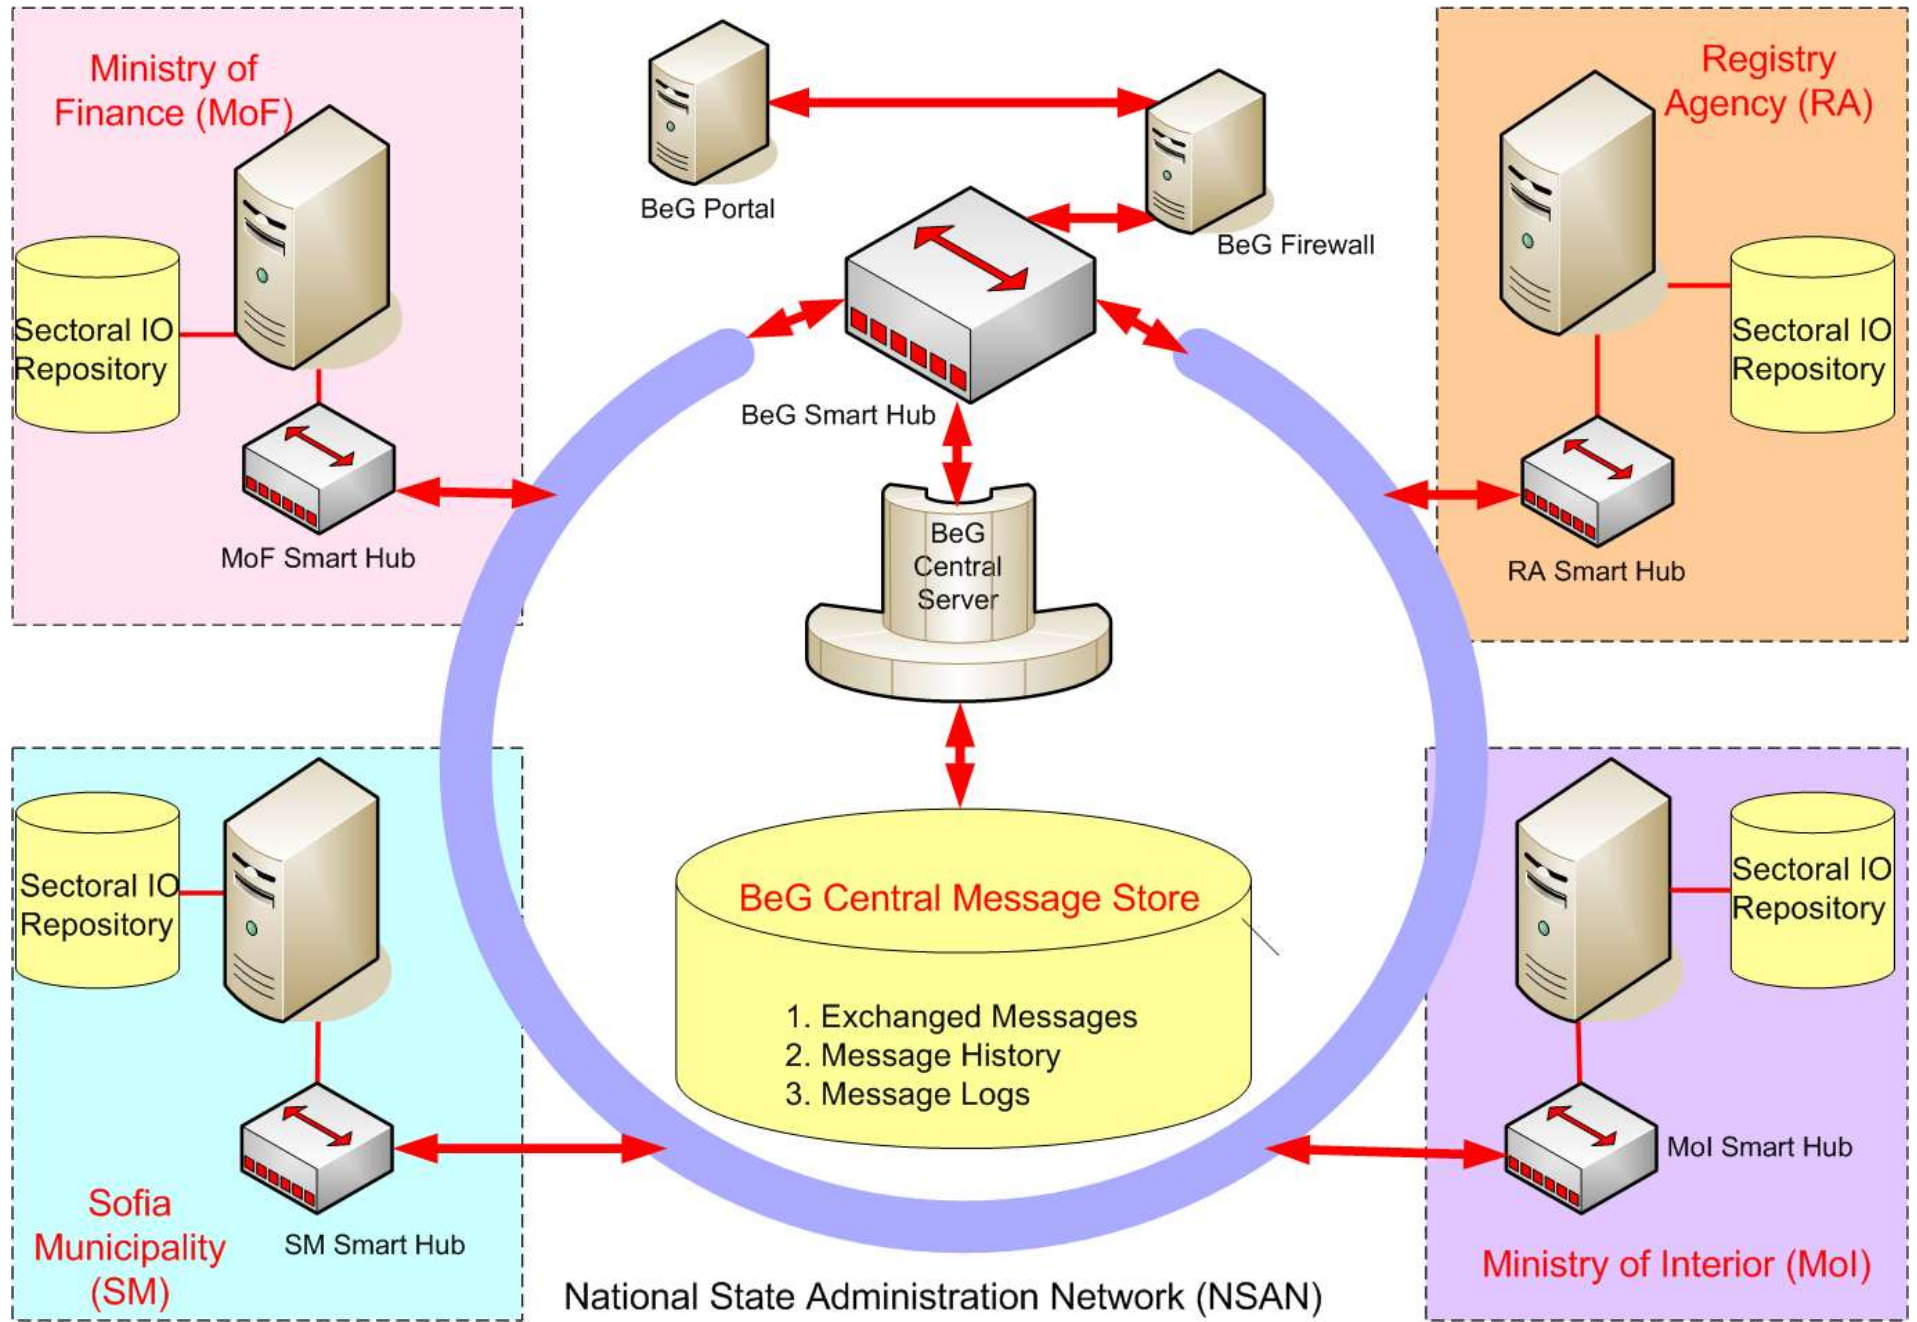

BeG Infrastructure

BeG Data Manager

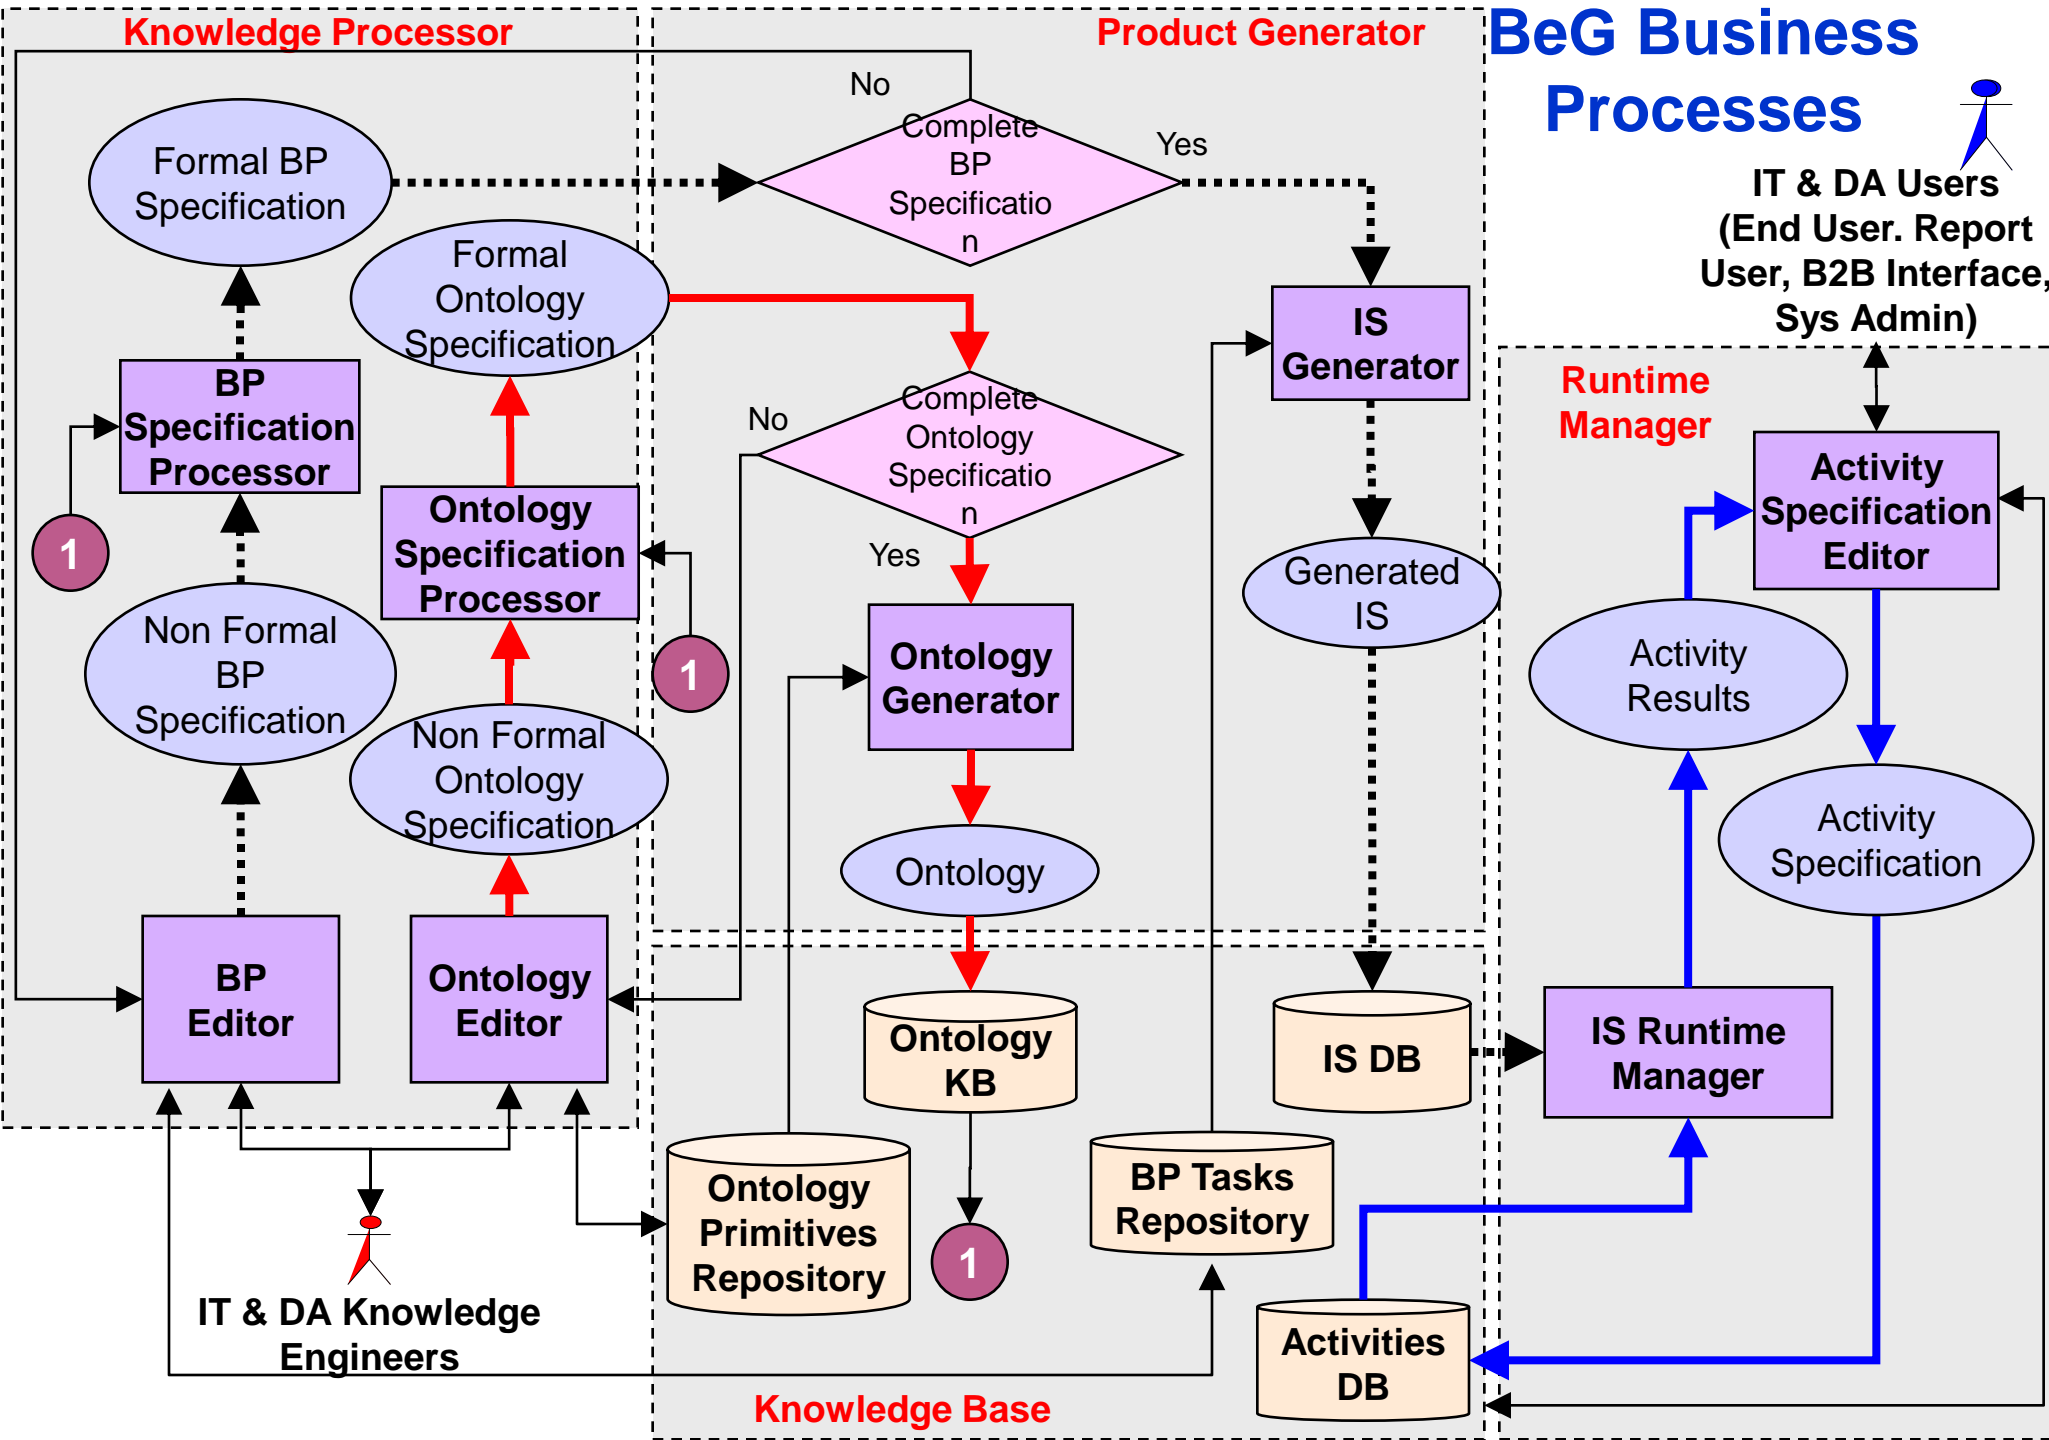

BeG Smart Hub

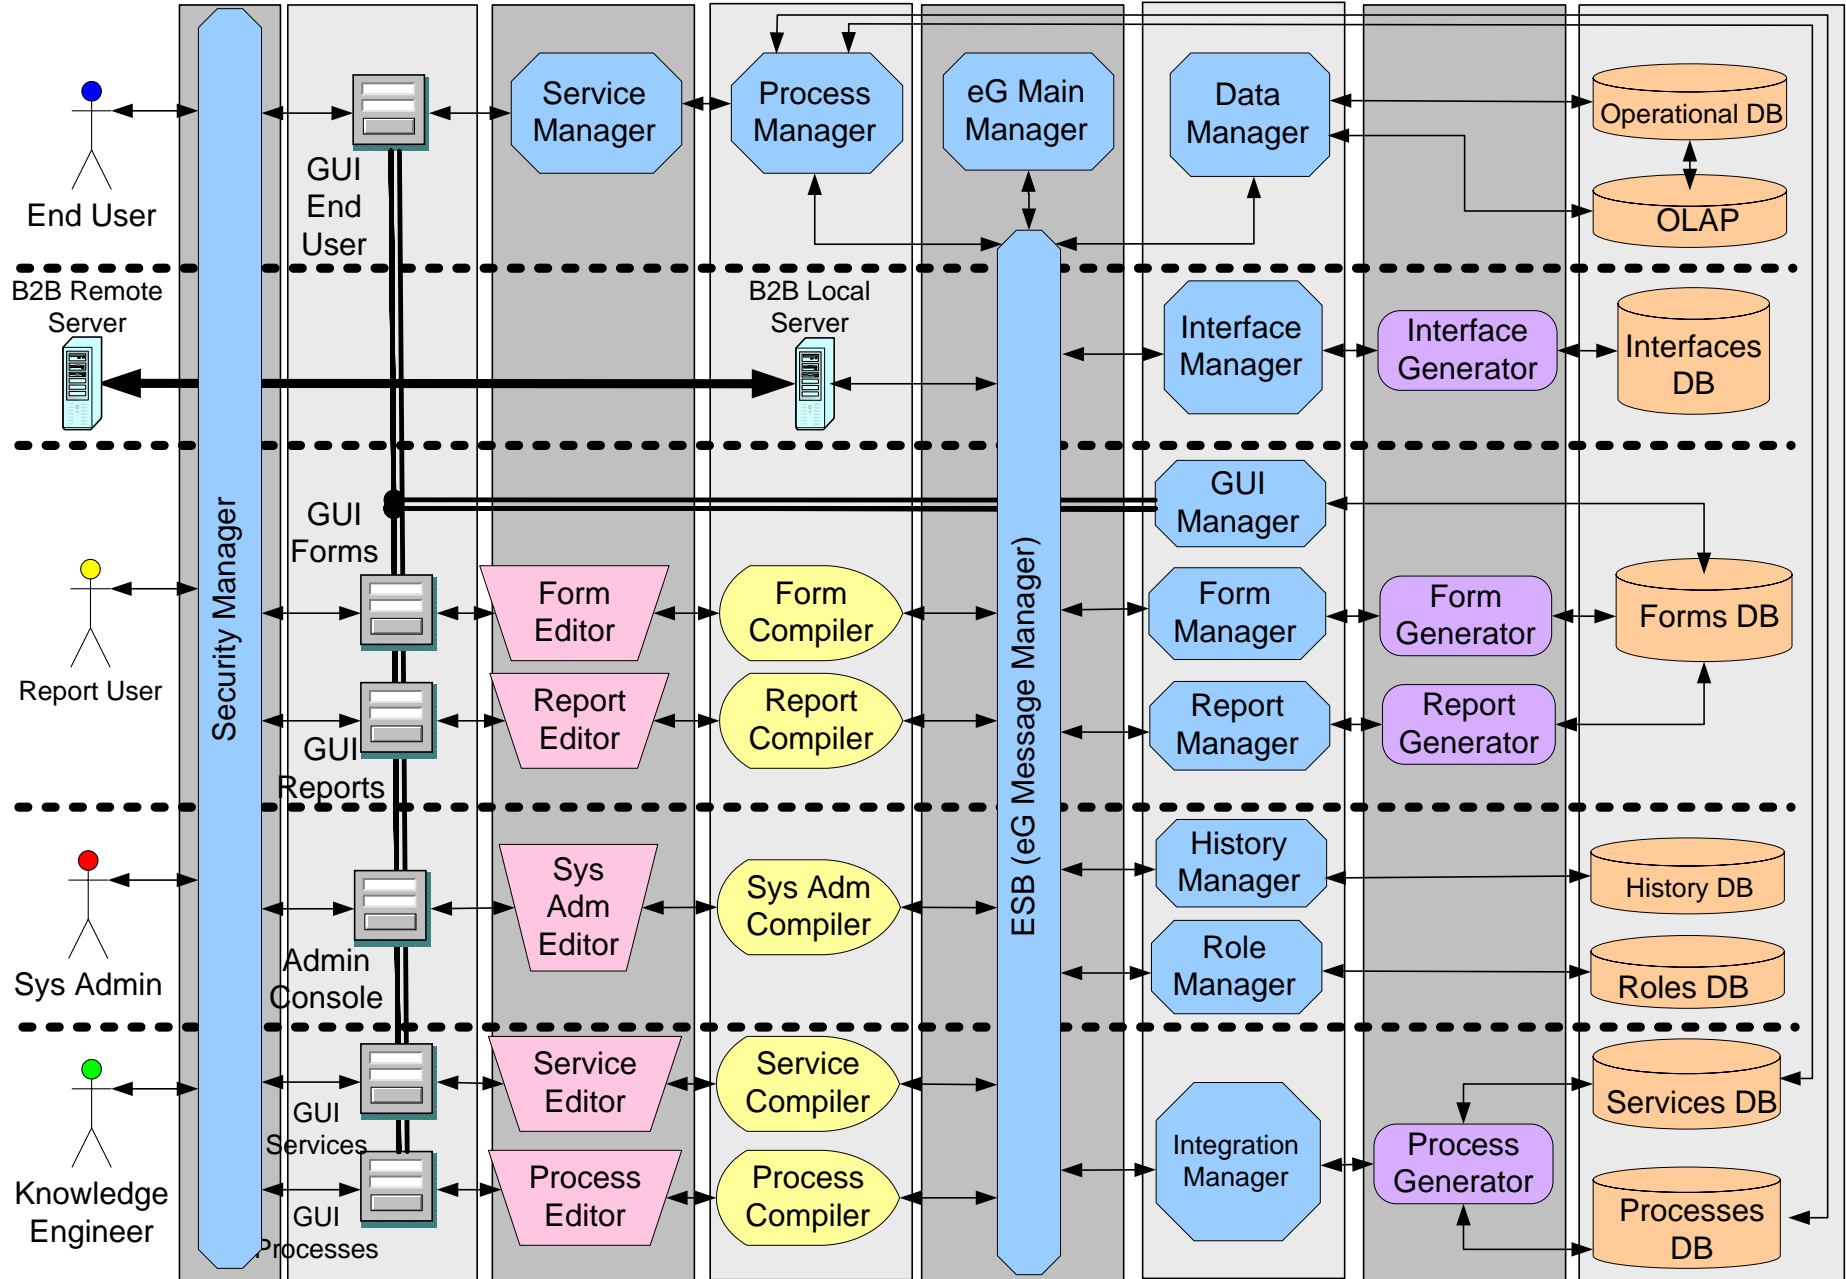

BeG Business Processes

IT & DA Users
(End User, Report User, B2B Interface, Sys Admin)

BeG Technological Framework

Practical SOA Effects

- **Big IT company**, with 10 years experience in e-Gov solutions in central and local administration, uses mechanisms allowing the **time for development of new applications** to be reduced by **50%** and **cost reduction** by **70%**.
- **Bulgarian IT company**, experienced in the above mentioned technologies, has demonstrated how can be covered **more than 70 business processes** in local administration with slight changes **in one template process**.
- **Bulgarian IT company**, developing applications for central administration has restructured its own staff reducing the number of programmers and test engineers and increasing the number of business analytics due to implementation of new methodology for **automated generation of multilayer Java applications**. Time for development and tests **is reduced by 50 %**.
